2.1	Existing Regulatory Mandates for Drug Products	11
2.2	Container Unique Identifier (CUID).....	11
2.3	Selecting a CUID Data Carrier.....	13
2.4	Approaches for the CUID Structure	14
2.5	CUID Stability Requirements	17
3	Using DMC as CUID Carrier.....	19
3.1	Bar Code Structure in General.....	19
3.2	DMC Manufacturing Technologies	19
3.3	DMC Dimension and Positioning	21
3.4	Specific Requirements for DMC Reading	26
4	Using an RFID Tag as a CUID Carrier	33
4.1	RFID Technology Brief.....	33
5	Implementation and Use.....	41
5.1	General Considerations	41
5.2	Reading the CUID in a Filling Line.....	42
5.3	Reading CUID in an Automated Inspection Machine.....	46
5.4	Reading CUID in Labeling/Assembly Line/Packaging Line	53
6	Data Management	55
6.1	The Shift Register	55
6.2	Traceability Data Collection Best Practice – Single Machine	55
6.3	Traceability Data Collection Best Practice – Process Machines/Lines	56
6.4	Types of Data That Can Be Shared Between Machines.....	56
6.5	Data System Architecture	60
6.6	Data Sharing Method	61
6.7	Data Volumes.....	61
6.8	Data Retention Time	61
7	Program Objectives versus Validation Approach	63
7.1	Intended Use (Specific Internal Needs).....	63
7.2	Regulatory Impact and Regulatory Compliance	63
7.3	Validation Approach	64
7.4	Implement an Adequate Concept Phase	64
7.5	Validation of The Intended Use.....	65
7.6	Audit Trail.....	67
7.7	Data Integrity.....	68
